#### **DETAILED ACTION**

Applicants' response (Appellant's brief) dated 01/09/2006 has been received and entered.

Claims 1-10 are remain pending in the application.

Applicant's Brief request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

Applicant's arguments have been considered but are moot in view of the new ground(s) of rejections as follow:

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1, 3-4, 6-7 and 9-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mol et al., US Patent No. 5,856,855, in view of Wortman et al., US Patent 5,771,328.

Regarding the above claims, Mol et al. disclose a surface light source device in a liquid crystal display device comprising:

a guide plate (9) having an incident end face (13), an emission face (19), wherein the emission face having a light scattering element distributed (element 33);

a light source (11);

Mol et al., however, do not disclose the emission face in which a rough area having a roughness is small than that of the light scattering elements. Wortman et al. do disclose a guide

Art Unit: 2871

light (film 30) in which emission face having a light scattering elements with a different roughness and the light scattering elements projected out the plane of the emission face (i.e., projecting out of dashed line 39) (see figure 3). In other words, a guide light can be provided with a rough area having a small roughness (e.g. portion having small prism) and a light scattering elements having a large roughness (e.g., portion having taller prism). Therefore, it would have been obvious to one skill in the art at the time of the invention was made to modify the Mol et al. emission face having a rough area and a light scattering elements area, wherein the roughness of the rough area is smaller than that of the light scattering elements area as shown by Wortman et al. in order to obtain a display inhibiting visibly apparent optical coupling without substantially reducing the amount of light redirect toward a normal viewing axis (see Summary).

### **Double Patenting**

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Application/Control Number: 09/330,016

Art Unit: 2871

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1-10 stand rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 3, 6 and 9 of U.S. Patent No. 6,339,458.

Although the conflicting claims are not identical, they are not patentably distinct from each other because both application and the patent disclose a surface light source device having at least two different zones with two different roughness degrees.

It should be noted that claims 3, 6 and 9 should be included all limitation of the based claims (e.g., claims 1-2, 4-5 and 7-8) which discloses the surface light source device having at least two different zones with two different roughness degrees to form two different regions (e.g., first and second emission promotion regions) as the claimed invention. In addition, re "two way" patentability test, Applicants have not provided that why claims could not have been filed in the same application. In other words, the double patenting would be made and proper.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dung Nguyen whose telephone number is 571-272-2297. The examiner can normally be reached on Tuesday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert H. Kim can be reached on 571-272-2293. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
